EDUCATION

Kristianstad University

Bachelor's Degree in Software Development

(All coursework completed; degree certificate pending)

Kristianstad

Sept 2023 - June 2026

University of Skövde

Project Management - Basic concepts and methods, 7.5 credits

Distance

Jan 2026 - Jun 2026

Relevant courses: Android app development (Kotlin), Software Engineering, Project Management, Machine Learning, Big Data, Fullstack Development, Backend Development, Algorithms and Data Structures, Database Technique, Computer Security, Operating Systems, Data Communication.

WORK EXPERIENCE

Jula AB

Store Associate

- Help customers with product questions.
- Responsible for the store's social media.
- Checkout work and customer service.

Hässleholm

2021 - Ongoing

Linnéskolan

Substitute Teacher and Student Assistant

- Taught students and supported daily schoolwork.
- Collaborated with teachers to create a safe learning environment.

Hässleholm

August 2020 - June 2021

Swedish Armed Forces

Military Service - Conscription

- Completed conscription at Södra skånska regementet.
- Worked in teams under time pressure and in varying environments.
- Gained experience in responsibility, structure, and clear communication.

Södra skånska regementet, Skåne

2019 - 2020

SKILLS

Programming Languages:	Python, Java, JavaScript, Kotlin
Mobile:	Android, Jetpack Compose, MVVM
Backend:	Node.js, Express.js
Frontend:	HTML, CSS, React, Vite, Next.js
Databases:	MongoDB, Firebase (Firestore, Authentication), MySQL, MSSQL
Data/ML:	Scikit-learn, Pandas, PySpark, Model evaluation (MAE/RMSE/R ²)
Tools:	Git, VS Code, Android Studio, IntelliJ, Postman, Figma
Methodologies:	Agile, Scrum, Clean Code, Unit Testing

LANGUAGES

Swedish: Native language

English: Very good (fluent in speech and writing)

Combitech - Android Application *Kotlin, Jetpack Compose, Firebase*

University collaboration

Android application developed in collaboration with Combitech as part of a university course in mobile application development. The aim of the project was to increase public awareness and preparedness regarding Sweden's total defence through engaging and educational content.

I worked broadly across the application with a strong focus on architecture, feature integration, and overall app structure. I designed and implemented central navigation flows and core functionality such as categories, quizzes, facts, and mini-checklists using Jetpack Compose and the MVVM pattern. I also created and refactored shared UI components to ensure visual consistency and good maintainability throughout the app.

The backend is built with Firebase Authentication and Firestore, enabling anonymous and authenticated users, onboarding flows, progress tracking, and persistent user data. I acted as technical coordinator in the team, responsible for architectural consistency, solving integration problems, and supporting team members during development. The project was developed in a team using Git, Jira, and agile working methods.

Interactive House *Project Manager, server/integration, GitHub workflow*

github.com/interactive-house-hkr/interactive-house

Appointed project manager for a Software Engineering project with approximately 16 people divided into several subgroups. I was responsible for planning, task distribution, GitHub Projects, issues, branching, pull requests, iterations, and coordination between groups.

I also coordinated the work on shared project documents, including requirements specifications, risk management, and test plans. In addition to project management, I primarily participated in server and integration work, but also supported app, web, and Arduino/device parts when needed.
