Education

Kristianstad University Kristianstad
Degree of Bachelor of Science, Main Field of Study: Computer Science *Sep 2023 - Jun 2026*
Software Systems Development programme, 180 credits. Degree awarded July 2026.

Additional course: Project Management - Basic Concepts and Methods, University of Skövde, 7.5 credits (2026).

Selected coursework: Software Engineering, Mobile Application Development (Kotlin), Backend Development, Full Stack Development, Algorithms and Data Structures, Database Technique, Computer Security, Operating Systems, Machine Learning, and Big Data Analytics.

Work Experience

Jula AB Hässleholm
Store Associate *2021 - Present*

- Help customers with product questions and work with checkout and customer service.
- Manage the store's social media presence.

Linnéskolan Hässleholm
Substitute Teacher and Student Assistant *Aug 2020 - Jun 2021*

- Taught students, supported daily schoolwork, and collaborated with teachers.

Swedish Armed Forces Södra skånska regementet, Skåne
Military Service - Rifleman *2019 - 2020*

- Completed nine months of military service and worked in teams under time pressure and in varying environments.

Technical Skills

Programming languages: Python, Java, JavaScript, Kotlin
Mobile: Android, Jetpack Compose, MVVM
Backend: Node.js, Express.js, REST APIs
Frontend: HTML, CSS, React, Vite, Next.js
Databases: MongoDB, Firebase (Firestore, Authentication), MySQL, MSSQL
Data and ML: scikit-learn, pandas, PySpark, model evaluation (MAE, RMSE, R^2)
Tools: Git, GitHub, Jira, Postman, VS Code, Android Studio, IntelliJ, Figma
Development practices: Agile, Scrum, Clean Code, unit testing

Languages

Swedish: Native
English: Fluent in speech and writing

Projects

Bachelor Thesis - Performance Trade-offs in API Rate Limiting 2026
Node.js, Python, load testing, P95 latency *15 credits*

- Compared Queue-on-Limit and Drop-on-Limit in a local Node.js API under steady and burst load.
- Used a Python-based load generator and measured success rate, error rate, mean latency, P95 latency, and response-time variability.
- The results showed a clear trade-off: queueing handled more requests but caused much higher tail latency under heavy load, while dropping requests kept latency lower and more stable.

Combitech - Android Application 2025
Kotlin, Jetpack Compose, Firebase, MVVM *University collaboration*

- Developed an Android application in collaboration with Combitech as part of a university course. The application focused on public awareness and preparedness regarding Sweden's total defence.
- Designed and implemented navigation flows, categories, quizzes, facts, mini-checklists, and shared UI components.
- Worked as technical coordinator, supported integration work, and helped keep the architecture consistent. The team used Firebase Authentication, Firestore, Git, and Jira.

Interactive House 2026
Project Manager, server and integration work *Software Engineering project*

- Project manager for a course project with approximately 16 people divided into several subgroups.
- Coordinated planning, task distribution, requirements specifications, risk management, test plans, GitHub Projects, issues, branches, and pull requests.
- Participated mainly in server and integration work and supported the app, web, and Arduino/device groups when needed.
